

Introducing the Planned Maintenance Schedule Report

December 12, 2011 – Avon, CT – Today RMI Corporation announces the release of its Planned Maintenance Schedule Report. This report enables service departments and dispatchers to review future planned maintenance services for both customer and business owned equipment in support of effectively scheduling resources.

Identifying when both company and customer owned equipment are due for planned maintenance service is paramount to a successful business. The Planned Maintenance Schedule reporting tool facilitates the scheduling of work in a manner that is convenient to equipment workloads while supporting the business' goal of improving performance and uptime of the fleet.

“Over the years, the rental market has really taken advantage of the business opportunities developing in the service field. More businesses have held onto equipment longer, driving up the need for on-demand and planned maintenance services.” Said Lauren Dorman, Vice President – Product Development. “ADVANTAGE empowers the rental firm to offer the same high quality service levels on their customer’s equipment as they do their own fleet through flexible reporting and scheduling based on equipment usage or passage of time. The development of the Planned Maintenance Schedule Report enables ADVANTAGE users to provide concise reporting of upcoming maintenances due for their own fleet and that of their customers.”

ADVANTAGE users will benefit from the Planned Maintenance Schedule Report in early 2012.
